

■ FormPort® Designer

If you've already made Capella Technologies FormPort Flash/DIMM or FormPort Server products part of your organization's output strategy, you've taken the first step in converting plain ASCII data from legacy enterprise applications into finished, professional forms. Now, Capella Technologies invites you to fully leverage this solution with Capella Technologies FormPort Designer.

Develop New Forms on Demand

Many FormPort users rely on Capella Technologies or third party resources to develop their organization's form templates. While this process works well for companies with a limited number of forms and infrequent updates, it does not provide the flexibility needed for organizations with regular or time-critical modification requirements.

Capella Technologies FormPort Designer gives you all the tools you need to develop your own form templates, exactly to your specifications and exactly when you need them. No more waiting!

Powerful Form Template Creation Tool

Capella Technologies FormPort Designer offers the ease-of-use desired by novice users combined with the flexibility demanded by experienced designers. It gives users the ability to incorporate a wide variety of data fields into an unlimited number of document designs, taking full advantage of the capabilities of your organization's HP® LaserJet® printers.

Document templates created by Capella Technologies FormPort Designer can contain graphics and logos, lines and "static" text in a variety of fonts and sizes. The forms also contain placeholders or fields for the incoming data from your legacy enterprise applications. The form designer can control the placement of these fields, the typeface style for this data and the font size.

No Programming Required

Determining which data gets placed into a specific field is a surprisingly simple process. One only needs a sample of output from the desired enterprise application - including popular applications such as JDE or Oracle.

The enterprise application user prints as if they were outputting to a line printer. Instead of sending the data to a printer, however, the output is captured into an ASCII print file.

Using a simple, windows-based print mapping program, the FormPort Designer user can examine the various blocks of data within the ASCII print stream and associate these blocks with specific fields in the form template. It's that simple!

Advanced Custom Forms

The imported data can even be formatted as MICR encoded text and barcodes, making the Capella FormPort Designer an ideal tool for creating checks, packing slips and more. FormPort Designer is so flexible, you can even create forms designed for specific clients and money-saving self-mailing forms.

Control and Consistency

FormPort Designer formats plain text data independent of the original application. As a result, you can format data with complete consistency across multiple applications and even multiple platforms, strengthening your organization's branding and providing a more cohesive and professional image.

Economical

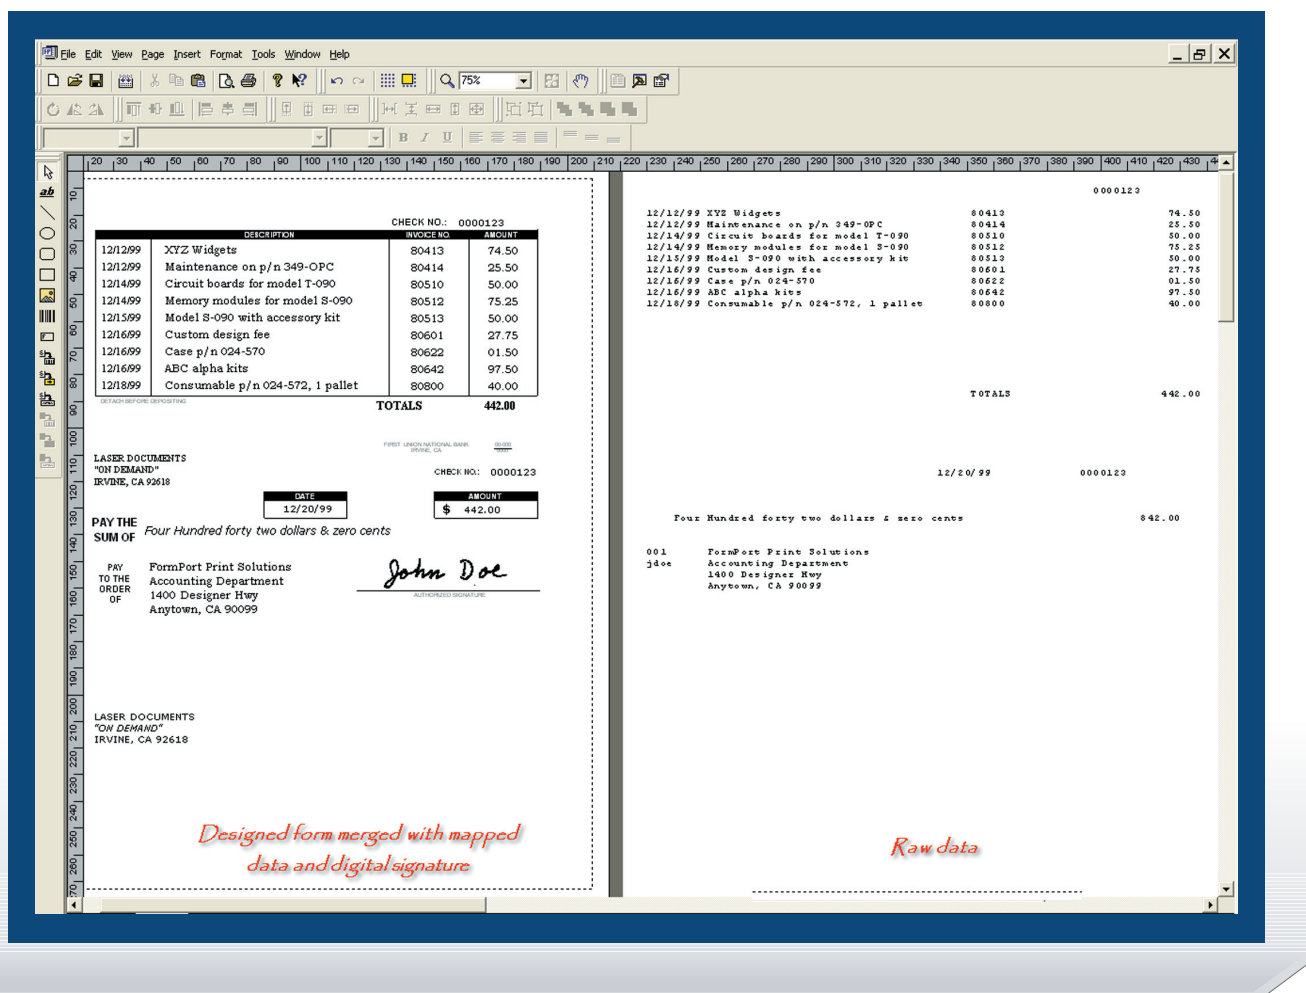

As part of a complete FormPort printing solution, FormPort Designer gives organizations the ability to avoid the cost and storage requirements of expensive, inflexible pre-printed forms, while also avoiding the expense of an outside design service.

Capella Technologies Quality and Experience

Capella Technologies, Inc. specializes in Output Management solutions that enhance, track and secure your documents. Capella Technologies can help your organization review and improve your processes around business to business transaction documents. Our products can help you to;

- Improve efficiencies
- Reduce cost
- Improve customer service
- Improve your corporate image
